Note: All of above 4 filed are mandatory to fill.

Save:

When save button is clicked, above 4 fields should be saved in the database & appeared I the right side table. Jig Status should be changed as 'WORK'.

It is better if SAVE button is inactive till all 4 field are filled.

Also if any duplication has happened to the file name an error message should be appeared as 'FILE NAME ALREADY EXISTS' when save button is clicked. Record should not be saved.

Edit:

Any alteration work done to the jig (WORK Status) in right hand side table should be saved clicking this. Existing record is overwritten.

If any duplication has happened to the file name an error message should be appeared as 'FILE NAME ALREADY

EXISTS' when save button is clicked. Record should not be saved.

Delete:

By clicking this user should able to delete a existing record in the right hand side table. Before deleting the record a warning message should be appeared as below.

Clear:

Just to clear the data on left hand side (to clear left side window). Nothing should happen to the relevant data on the right hand side table.

Note:

In the table, first three & last three gaps should be manually entered.

Run:

After entering the first three values manually, K –K distance should be entered & should click 'RUN' button to automatically fill other gaps. Gaps should be symmetrical around the center mark but values displayed as accumulated values.

Save:

To save generated values in the database. Clicking of save button does not submit jigs to QA & status is remained same as 'WORK'.

If need production should have ability to do changes to the saved items & save again.

E,g. Change colors, Change K-K distance.

Re-clicking of 'Save' button should overwrite the previous record.

Submit to QA:

When this is clicked status of the jig is changed as 'PENDING VALIDATION'. Thereafter production has no right to do any changes to that jig.

Delete

To delete a saved file. (before submitting to QA)

Option buttons:

When an option button is clicked, only jigs with relevant status should come to the drop down just below them. *E.g.* If Option button for 'Pending Validation' is clicked only the jigs have pending validation status should come to the drop down

Drop Down:

When a jig from drop down is selected, its file name, drawing & issue should be appeared on right hand side. Also its weight, cord length, middle point & Total number of marks also appear below the drop down. Also the status of the jig shall be appeared in front of caption 'status'.

- Before selecting a jig from drop down dates & comments inside the blue colored box should be blank.
- When a 'Pending Validation' jig is selected, nothing shown in the blue colored box but 'Date for FAI', 'Date validated', 'validation due' & 'Comments' text boxes should be active.
- When a 'Only for FAI' jig is selected 'Date for FAI' should be appeared in the particular text box in the blue colored box. 'Date validated', 'Validation due' & 'Date Archived' text boxes should be active but blank.
- If a 'validated' jig was selected from the drop down, its validated & validation due dates should be appeared in the blue colored box with comments if any. 'Date for FAI' & 'Date Archived' text boxes should be active but blank.

- If a 'Validation due' jig was selected from the drop down, its validated & validation due dates should be appeared in the blue colored box with comments if any. 'Date for FAI' & 'Date Archived' text boxes should be active but blank.
- If a 'Archived' jig is selected, the date it was archived should be appeared in the blue color box with comments if any. Other text boxes, 'Only for FAI', 'Validated' & 'Archived' buttons should also be inactive.

Preview Marks:

Clicking this QA should have ability to get a preview of the jig.

Only for FAI/ Validated/ Re-validated/ Archive buttons

These buttons are used to change the status of jigs in all status except 'Work'

Only for FAI

Status will be change as 'Only for FAI'. Production should able to run the machine if status is 'Only for FAI'. When clicked this, 'Date for FAI' should be changed as today.

Validated

If the FAI passed, QA use this button to validate the jig for mass production. Once click this button status will be change as 'Validated' & 'Today' should appear on 'Date Validated' text box.

Validation due date should be manually selected from a calendar.

'Date for FAI' & 'Date Archived' should be blanked.

Production should able to run the machine if status is 'Validated'.

Archived

If a file is no longer used or, validation failed or corrupted, they must be moved to archive location clicking 'Archive' button. Status of the file will be changed as 'Archived' & 'Today' should appear on 'Date Archived' text box.

'Date for FAI' & 'Date Validated' & 'Validation Due' should be blanked.

Production should not be able to run the machine if status is 'Archived'

Delete Archived File

To delete Archived files.

File can be deleted only if 'Today – Date Archived > 5years'. If it is less than 5 years following warning message should appear.

Save

To save changed data (status) to the database.

Close

To close the window

Order List

When 'Only for FAIs' option button is selected ONLY the jigs with 'ONLY FOR FAI' status should be appeared here.

When QA click 'Only for FAI' those files can be fed to the machine through below form.

Order List						х
Status O Work	O Only f	or FAIs	Ov	alidated	O Archived	
Select Item Description Number of tur	ns ADE	REMOV	Issue	ing No.]]]
File No.	Item Description	Drawing No.	Issue	Status	No of Turns	CMAV
		Te	Clear emporary Data	Save		

Option buttons:

When an option button is clicked, only jigs with relevant status should come to the drop down just below them. E.g: If Option button for 'Only for FAI' is clicked only the jigs have 'Only for FAI' status should come to the drop down.

Access controls

- 'Work', 'Only for FAI' & 'Validated': Production should have rights to operate the machine
- Archived': QA only has rights to operate the machine

Other controls:

If the status is 'Work', 'Only for FAI' or 'Archived' number of turns should be pre-defined value of 1. It cannot be changed.
